Shaik Ibtihajulla Sha

Karlskrona, Sweden |+46764341815 | shaikibtihaj07@gmail.com | Linkedin |GitHub
English: Fluent | Swedish: Learning (Intermediate)| Open to Relocation
Availability: Available for **full-time internship (3–6 months)**,
Flexible, remote-ready, and able to start immediately.

PROFESSIONAL SUMMARY

Data-driven engineering student with hands-on experience building **automation and operator-friendly tools** for **Computer Vision (CV) data pipelines**, including **dataset uploads, ingestion, cataloging, validation, quality checks, and reporting**. Strong focus on **data logistics, status visibility, and evaluation metrics** to ensure **high-quality, well-tracked datasets** for downstream training workflows. Highly motivated to reduce manual effort and errors through simple, reliable Python-based solutions.

EDUCATION

Blekinge Institute of Technology (BTH), Sweden – Exchange Program, Computer Science | 2025–2026
Relevant Coursework: Data Analytics & Data Mining, Databases & Data Management, Applied Statistics, Machine Learning, Python Programming

ACADEMIC & TECHNICAL PROJECTS

CV Data Pipeline Automation Project

Python, Pandas, Excel, Git

- Designed and implemented **automation tools** for **dataset uploads, ingestion tracking, and validation**
- Built **cataloging logic and metadata tables** to track dataset lifecycle status from collection to downstream consumption
- Implemented **data quality checks and evaluation metrics** to ensure dataset completeness, consistency, and correctness
- Developed **operator-friendly Excel reports and dashboards** to improve **status visibility** across datasets
- Reduced manual verification effort and operational errors by automating repetitive data handling tasks

Learning Data Structuring & Quality Analysis Project

Python, Pandas, Visualization

- Converted **semi-structured and unstructured datasets** into clean, analysis-ready formats
- Applied **validation rules** to identify missing values, schema mismatches, and data inconsistencies
- Created **tracking tables** for ingestion state, quality flags, and dataset readiness
- Generated concise reports to support **data logistics and decision-making**

Data Structuring & Quality Analysis Project

Python, Pandas, Visualization

- Converted **semi-structured and unstructured datasets** into clean, analysis-ready formats
- Applied **validation rules** to identify missing values, schema mismatches, and data inconsistencies
- Created **tracking tables** for ingestion state, quality flags, and dataset readiness
- Generated concise reports to support **data logistics and decision-making**

Computer Vision Dataset Exploration (Academic)

Python, OpenCV

- Worked with **image datasets** to support **Computer Vision training workflows**
- Validated CV data prior to ingestion, identifying corrupt, incomplete, or mislabeled files
- Ensured datasets met **quality and consistency requirements** for downstream users

TECHNICAL SKILLS

Programming & Automation:

- Python (data manipulation, scripting, pipeline automation)
- Pandas, NumPy
- Lightweight utilities and simple APIs
- Linux & scripting fundamentals

Data Handling & Analysis:

- Dataset uploads and ingestion workflows
- Data validation and quality checks
- Cataloging and metadata management
- Data lifecycle tracking and status visibility
- Evaluation metrics and reporting

Visualization & Reporting:

- Excel (operator-friendly dashboards, reporting)
- Matplotlib / Seaborn

Tools & Platforms:

- Git & version control
- Basic SQL
- Exposure to R
- OpenCV & Computer Vision fundamentals

CORE COMPETENCIES

- Automation of operational workflows
- Strong data quality reasoning
- Practical, operator-focused tool design
- Problem-solving mindset with fast learning ability
- Clear technical communication

CERTIFICATIONS

- Python for Data Science
- Data Analysis with Pandas
- Git & Version Control Fundamentals
- Introduction to Computer Vision (OpenCV)
